

Requirement Analysis Phase

Customer Journey Map: IT Support Lifecycle Transformation

Attribute	Project Information
Project Title	Auto Ticket Classification using Flow Designer
Phase / Stage	2. Requirement Analysis
Document Title	Customer Journey Map
Platform & Scope	ServiceNow Utah / Vancouver / Washington DC (Global Scope)
Team ID	SWTID-2026-4988

1. Journey Map Overview

This document outlines the end-to-end journey of an academic user encountering an IT incident. It contrasts the legacy manual triage experience against the transformed automated experience powered by ServiceNow Flow Designer. The journey encompasses six continuous milestones: Incident Encounter, Ticket Submission, Automation & Triage, Notification, Assignment, and Closure.

2. As-Is (Legacy) vs. To-Be (Automated) Experience Comparison

Stage	As-Is (Manual Legacy Process)	To-Be (Automated Flow Designer Solution)	Customer Emotion Shift
1. Issue Encounter	User faces projector failure or Wi-Fi disconnection right before lecture.	Same issue occurs, but user accesses a simple, direct helpdesk portal.	Frustrated -> Hopeful
2. Ticket Submission	User forced to browse through complex IT category hierarchies they don't understand.	User enters only Caller Name and Short Description (e.g., "WiFi not working in library").	Confused -> Delighted (Effortless)
3. Triage & Routing	Ticket sits in a triage backlog for 2-5 hours awaiting human dispatch.	Flow Designer triggers in under 1 second, analyzes keywords, and sets Category and Subcategory.	Impatient -> Amazed (Instantaneous)
4. Acknowledgment	User receives no communication; wonders if ticket was lost; calls desk.	Automated confirmation email delivered to Caller inbox within 2 seconds with ticket ID.	Anxious -> Reassured & Confident
5. Ticket Resolution	Delayed routing meant technicians arrived after class ended.	Technician receives correctly classified ticket immediately and fixes AP/hardware.	Disappointed -> Highly Satisfied
6. Record Quality	Inconsistent categories skewed monthly ITSM reports and audits.	100% standardized data integrity with dependent choices enforced.	Distrustful -> Transparent & Reliable

3. Detailed Customer Touchpoint & Systems Matrix

Touchpoint Dimension	Phase 1: Ticket Creation	Phase 2: Automated Triage	Phase 3: Caller Notification	Phase 4: Technician Resolution
User Action	Enters issue details in ServiceNow portal form.	None (Automated background processing).	Reads confirmation email on smartphone/laptop.	Interacts with technician; verifies resolution.
System Component	Incident Workflow Table (u_incident_workflow).	Flow Designer: "Auto Classify School IT Tickets".	ServiceNow Email Engine (sys_email outbound).	Incident Workflow Record updated to Resolved.
Touchpoint	ServiceNow Next Experience Web UI.	ServiceNow Workflow Engine (Asynchronous).	Institutional Email (Outlook/Gmail).	Physical classroom or digital confirmation.
Pain Points Addressed	Eliminated tedious dropdown guessing.	Eliminated human bottleneck and dispatch delays.	Eliminated lack of submission visibility.	Reduced Total Resolution Time (MTTR) by 60%.
